

Each project focuses on:

- RESTful API development
- Database design with Lucid ORM
- Frontend development with VueJS
- Backend development with adonisJS
- Authentication and authorization
- File handling where necessary
- Email notifications where required

Questions

1. You are working for a fitness center chain that needs a membership management System - Karthick

Requirements:

- Members should be able to register and manage their profile
- The system should track member attendance
- Members should be able to book fitness classes and view their schedule
- Trainers should be able to view their class schedules and member lists
- Administrators should be able to manage memberships, classes, and pricing

Tasks:

- Design and implement database schema using Lucid ORM
- Create RESTful API endpoints using AdonisJS Controllers
- Implement authentication and role-based access
- Build responsive UI components using VueJS and Tailwind CSS

2. You are developing a restaurant ordering and reservation system - charan

Requirements:

- Customers should be able to browse menus and place orders online
- The system should handle table reservations with time slots
- Staff should be able to manage orders and update order status
- Customers should be able to view their order history
- Staff should be able to manage menu items and availability

Tasks:

- Design database models using Lucid ORM
- Create API endpoints with proper validation
- Implement secure authentication system
- Build dynamic UI components with Vuex state management

3. You are creating a learning management system for a coding bootcamp - rajesh.

Requirements:

- Students should be able to access course materials and submit assignments
- Instructors should be able to create courses and grade assignments
- The system should support video lectures and coding exercises
- Students should be able to track their progress and grades
- The platform should support discussion forums for each course

Tasks:

- Design database schema using migrations and models
- Implement file upload using AdonisJS Drive
- Create RESTful APIs for all features
- Build single-page application using Vue Router

4. Event Management and Ticketing System - daksina

Requirements:

- Event organizers can create and manage events (concerts, conferences, workshops).
- Users can browse, book, and pay for event tickets.
- Each event has a capacity limit, schedule, and digital ticket (PDF).
- The system should send confirmation emails with downloadable tickets.
- Admins can view analytics such as ticket sales and user participation.

Tasks:

- Design relational models for events, users, tickets, and payments.
- Generate PDF tickets with QR codes using file handling tools.
- Build APIs for event browsing, booking, and ticket validation.
- Use VueJS for user interface and real-time seat availability.
- Set up email notifications with attached tickets.
